PROFESSIONAL SUMMARY

Data Engineer with experience designing and operating batch and streaming data pipelines on AWS. Strong in Python and SQL, with hands-on Apache Airflow orchestration, dbt data modeling, and Apache Spark processing over S3, Glue, and Redshift. Focused on reliable, observable pipelines and pipeline performance.

TECHNICAL SKILLS

Data & Orchestration: Apache Airflow, dbt, Apache Spark **Cloud:** AWS (S3, Glue, Redshift)

Languages: Python, SQL

PROFESSIONAL EXPERIENCE

Role: Data Engineer

Company: Acme Analytics

Project Description: Batch and streaming data pipelines feeding the analytics warehouse.

Duration: Jan 2022 - Present

Responsibilities:

- Built Apache Airflow DAGs orchestrating nightly ETL from source systems into Redshift.
- Implemented dbt models to produce curated, tested analytics marts for reporting teams.
- Developed Apache Spark jobs to process large event datasets into partitioned S3 datasets on AWS Glue.

Achievements:

- Processed 5,000,000 records per day across production pipelines.
- Reduced pipeline runtime by 30%, improving data freshness for downstream analytics.

Role: Data Analyst

Company: Beacon Software

Project Description: Reporting and dashboards for business stakeholders.

Duration: Jun 2019 - Dec 2021

Responsibilities:

- Wrote SQL to power BI dashboards in Tableau for weekly business reviews.
- Automated recurring reports in Python to replace manual spreadsheet work.

Achievements:

- Delivered a self-service reporting layer that removed manual weekly spreadsheet preparation and gave stakeholders consistent, on-demand metrics.

EDUCATION

B.S., Computer Science, State University

CERTIFICATIONS

AWS Certified Data Engineer - Associate
